

Public Works salt storage building features high, clear-span wood trusses.

The garage maintenance facility is attached to the satellite office facility for the Department. The industrial tone of the building was lightened with the use of cupolas, asphalt shingles and wood windows.

The facility's fuel area outside of the maintenance garage.

Cost

\$2,594,000

Size and Type of Construction

This project consisted of a large parking site for truck storage and repair and two support buildings for the Parks and Public Facilities. One facility is a repair garage with attached office space. The other building is a semi-open salt storage facility with a high, clear-span wood trussed roof. The site contains its own fueling area for city vehicles.

Exterior/Envelope

Concrete
CMU
